Summary

Owner of PhysioWorks and Atlas PhysioWorks

I've been working as a Physical Therapist for over 20 years. In that time I have always continued to further my education receiving a certificate as a certified exercise expert for the aging adult. I have also had entrepreneurial ambitions, having my own company since 2007. This has evolved over time from a medical staffing company and now a physical therapy clinic that is focused on occupational medicine. The clinic has grown significantly over the last several years providing work conditioning and work hardening programs. I also have gone through several certificate programs for Functional Capacity Evaluations and most recently was certified in PGAP (activity coaching). I am also a certified life care planner and do expert work. As a company, we are striving to provide the best quality of care to optimize our patients' healing and return them back to their prior level of function.
